

Department of Mining Engineering

Freshman Struggles

Announcements

-CMES Open House canceled. Don't show up!

- Department calendar available online. Go to the department website, click on "undergraduate" and then "student involvement."

- Dont forget to register for SME!

Being a freshman is an exciting, yet terrifying time in your life. Many will find it hard to be away from home, aside from those who are from the valley or anywhere less than two hours away. But you will make plenty of friends here to help you through everything. Aside from that, you

could have a hard time navigating the campus. The solution for that is either map.utah.edu, or uofubus.com that tracks the buses for you so you can see in real time where they are. Midterms are almost if not already upon us, so you freshmen will begin to experience what

college testing is like. Even then, every professor handles their tests differently and if you pay attention in class you should be fine.

-Garrett Cadwell
Freshman/Sophomore Rep.

SAFETY COMMITTEE WEEKLY

The National Institute for Occupational Safety and Health (NIOSH) reports about 2000 eye related injuries a day! Many of these accidents could have been prevented with proper eye protection. According to NIOSH, the main reasons eye injuries occur is because workers are not wearing eye protection or they are wearing the wrong kind of eye protection for the job. Protect

STUDENT SPOTLIGHTS

Hey there, I'm Garrett Cadwell, freshman/sophomore rep and also a future 4th generation miner. All my life my father has worked for Barrick Gold of North America, so I have been around mining my whole life. I grew up in Elko, Nevada then moved here to Salt Lake City when I was eight. When I turned 15 I moved with my mother and father to Perth, Australia, leaving my brother and sister here to study in college. The reasons I seek to become a mining engineer are: A) I got the opportunity to visit a mine site in Australia and fell in love with mining, and B) my brother is a mining engineer and studied here at the U as well and said it was an excellent program.

My name is Chloë Simons and I'm a senior in the mining engineering program. Over the summer I interned at Morton salt as a project engineer. I recently married Nathan Ellgen, another senior in the mining program.

LAST WEEK'S EVENTS

John Reeves hosted some of our SME members at his house in Colorado this last weekend.
